

**IN THE SPECIFICATION**

Please amend the Specification as follows.

Please amend paragraph [0107] of Applicant's corresponding published application as follows:

[0107] Thus, with the transmission apparatus 11 in the state SD, the network controller 36 determines that the state transition condition 112 has been satisfied when it acquires the RTCP RR (with error), and changes the state of the transmission apparatus 11 from the state SD to the state SD (no transition is made). In contrast, when the network controller 36 acquires the RTCP RR (without error), it determines that the state transition condition 114 has been satisfied and changes the state of the transmission apparatus 11 from the state SD to the state SB, or when the network controller 36 acquires the RTCP RR (~~rejection~~with many errors), it determines that the state transition condition 115 has been satisfied and changes the state of the transmission apparatus 11 from the state SD to the state SC.
